

### KEY BENEFITS

-  **Automation across any Platform**
-  **Workflow Orchestration**
-  **Life Cycle Management**
-  **Eliminates Custom Code**
-  **Key Enabler for SaaS**
-  **Centralized Control**
-  **Self Service Automation**
-  **Easy Implementation**
-  **Mobility and Flexibility**
-  **Do More With Less**

### KEY FEATURES

-  **Automation Repository**
-  **Single User Interface**
-  **Vendor Neutral**
-  **On-premise/In the Cloud**
-  **Wide array of Plug-ins**
-  **Web & Smartphone enabled**

## AUTOMATING BUSINESS INTELLIGENCE™

### YOUR REALITY

Your company relies on business intelligence, planning, operational and financial analysis to improve and accelerate your business decisions. Time is of the essence in ensuring that your employees have the right information. IT relies upon users to submit forecast and budget data in a timely manner to ensure cycle milestones.

Data is stored on multiple servers, on-premise, hosted or in the Cloud, and a wide variety of applications have been put in place to support your decision making process.

Defining, managing, and monitoring the large number of underlying automation interfaces and interactions generated by these applications has become unwieldy and expensive in both time and money. The result is that a number of disparate scripting tools, languages and legacy schedulers are now cobbled together across multiple server environments. Brittle custom code, messaging systems and hardwired sensitive login information have been created to invoke these scripts and schedulers. The processes require significant manual intervention and lack interactive capability with little visibility by the end user or IT. The absence of an automatic audit trail creates compliance issues and risks.

Meanwhile, the users throughout your organization need to regularly run and monitor automated or manual processes on an ad-hoc basis to achieve corporate goals and objectives.

Maintaining the current infrastructure is costly and demands significant resources from IT.

### OUR SOLUTION

Star Command Center introduces simplicity and control to the automation processes that support all your applications. The acceleration and smooth execution of these processes is critical to the success of your business.

Star Command Center eliminates complex and brittle custom code and sequences tasks across disparate, hybrid computing environments and applications regardless of where the applications or data resides.

Star Command Center features a central Automation Repository which provides secure application and data automation source control, Life Cycle Management (LCM) and an audit trail for ensured compliance.

“Self Service Automation” allows users to view and run automated processes on an ad-hoc basis and quickly diagnose and address any potential issues. Star Command Center provides real-time alerts and actionable information to secured business and technical users. Through a single interface, a user can run and monitor their processes from any web-enabled device.

Significant improvements will be realized with Star Command Center through operational efficiencies which relieves the burden on your IT Department while lowering risk and maintaining compliance.

With Star Command Center, you will do more with less.

**SYSTEM REQUIREMENTS****WEB AND SMARTPHONE UI**

- Microsoft IE Version 7 or higher
- Firefox 3.0 or higher
- (Windows and OS-X)
- Safari 4.0 or higher
- (Windows, OS-X, and iPhone)
- Chrome 3.0 or higher
- iPhone
- Blackberry OS 5 or higher
- Android OS

**WINDOWS USER INTERFACE**

- Windows 2003 (32/64 bit) or higher \*

**AGENT**

- Windows 2003 (32/64 bit) or higher and most UNIX / Linux platforms
- Java JRE 6 or higher

**SERVER**

- Windows 2003 (32/64 bit) or higher \*
- Microsoft IIS Version 6 or higher

**REPOSITORY**

- MS SQL Server 2005 or higher
- Oracle 9.2 or higher

\* Requires Microsoft .NET Framework 3.5 SP1 or higher

**AUTOMATION ACROSS ANY PLATFORM**

Enterprises across multiple industries use the Star Command Center to seamlessly automate hybrid computing environments that co-exist in virtualized clouds, hosted servers and on-premise computing environments regardless of data location. Star Command Center is a key enabler for the next wave of SaaS in your hosted environment.

**WORKFLOW ORCHESTRATION**

Star Command Center sequences tasks and processes by providing a handshake between existing schedulers. It sequences tasks across computing environments and applications, using existing technologies and removes slack time created by required manual intervention.

**ELIMINATES CUSTOM CODE**

Star Command Center greatly reduces the number of moving parts and eliminates complex code with its predefined libraries of task packs designed for various BI applications including Oracle, Hyperion, IBM, Microsoft, SAP and QlikView. A simple to use interface integrates the processes across the applications and systems, thereby eliminating the constraint of lack of application knowledge.

**CENTRALIZED CONTROL AND COMPLIANCE**

A key feature of Star Command Center is the Automation Repository. The Automation Repository allows for secured and auditable source control of all your automation scripts and tasks. It shows "who ran what, where & how". Governance Risk and Compliance strategies are maintained and delivered with easily-met service level agreements.

**AUTOMATION LIFE CYCLE MANAGEMENT**

Star Command Center creates a complete audit history and offers Life Cycle Management (LCM) between development, test and production environments.

**SELF SERVICE AUTOMATION**

With its built in error handling and alerting, business and technical users are immediately notified on the progress of their critical processes. Authorized business users can view and run automated processes on an ad-hoc basis and quickly diagnose and address any issues. This empowers the secured business users to run the necessary automations and tasks without constant requests to systems administrators.

**MOBILITY & FLEXIBILITY**

Star Command Center extends the automation environment to mobile platforms. Automations can be run and monitored from any browser environment with real time alerts untethering business users from their desks and enabling pervasive decision-making.

**EASY IMPLEMENTATION**

Star Command Center is vendor neutral and easy to implement. Star Command Center leverages existing infrastructure with out-of-box functions available for a wide array of business applications. Via an intuitive user interface, cross-platform and cross-application tasks can be easily sequenced extending automation beyond application specific schedulers while completely eliminating manual processes.

**A RAPID RETURN ON INVESTMENT**

Star Command Center leverages your existing automation infrastructure and is used in diverse production environments by some of the largest and most complex corporations in the world. Star Command Center provides an immediate ROI and rapid return to value. This allows your organizations to do more with fewer resources and best of all, you can be up and running with Star Command Center in a single day.
